

Project Initialization and Planning Phase

Date	20 July 2026
Team ID	Dev Khurana
Project Name	Food Ordering Behaviour and Consumer Trends: A Structured Analysis
Maximum Marks	3 Marks

Define Problem Statements (Customer Problem Statement Template):

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	Food Delivery Platform Manager	Understand which cities, cuisines, and meal types drive the highest order volumes and revenue	It is difficult to spot clear patterns across 50,000 orders spanning 6 cities, 5 cuisines, and 4 meal types	Order data on city, cuisine, meal type, company type, ratings, and delivery time is scattered with no consolidated view Overwhelmed and unable to make timely, data-backed operational decisions	
PS-2	Restaurant Partner	Know which meal types and cuisines earn the highest customer ratings in each city	It is hard to tell whether low ratings are linked to delivery delays, meal type, or cuisine preference	Customer ratings, delivery time, and order details are not analyzed together in one place	Uncertain about where to focus service improvements
PS-3	Marketing & Strategy Analyst	Identify which customer segments (age group, dining company type) are most valuable	It is difficult to design targeted campaigns without knowing how age and social context shape ordering behavior	Demographic and behavioral data (age group, Alone/Family/Friends/Partner) is not segmented	Unsure whether marketing spend is being used effectively

				or visualized	
PS-4	Operations & Logistics Manager	Reduce delivery delays and improve on-time performance across cities	It is difficult to pinpoint where and why delivery times vary across orders	There is no visual breakdown of delivery time distribution across cities and order types	Frustrated by inconsistent service quality and customer complaints
